Konstantin Dolbilov

Senior Frontend / Full Stack Developer - React / Vue - SaaS & Interactive Computer Graphics

Gijon, Spain (CET, UTC+1) | cossamedia@gmail.com | github.com/konfrontend | linkedin.com/in/knstd | eng / ru

10+ years building web interfaces in TypeScript. Strong in UI/UX architecture and performance, with backend experience in Node.js and Java. Led development of the 3D CAD engine for a B2B SaaS product.

SKILLS

Frontend: TypeScript, React, Electron, Vue.js, Vite, Nuxt, Zustand, TanStack Query, Tailwind CSS, Motion, Web Workers, WebSockets, Progressive Web Application (PWA)
Graphics: React Three Fiber (R3F), three.js, WebGL, GLSL, Canvas API, SVG API
Backend: REST API, Node.js, Express, Hono, Java, Spring Boot
Data: Drizzle ORM, SQLite, PostgreSQL, MariaDB, MongoDB
Cloud & DevOps: Cloudflare, AWS, Docker, GitHub Actions
Quality: Playwright, Vitest, Core Web Vitals, Accessibility (WCAG), Search Engine Optimization (SEO)
Methodologies: Test-driven Development (TDD), Specification-driven Development (SDD), Feature-driven Development (FDD), Domain-driven Design (DDD)
AI: Claude Code, Model Context Protocol (MCP)

PROFESSIONAL EXPERIENCE

Senior Frontend Developer — Jigawatt Solar

contract Oct 2019 – Jul 2026

SaaS for solar dealers and installers: from interactive 2D/3D design and energy modeling to CRM.

- Engineered the 3D CAD modeling system in React for solar industry professionals. Shipped 80+ features, including procedural 3D mesh generation and real-time 3D topology editing.
- Authored a WebGL simulation algorithm that shows solar dealers a roof's yearly energy loss to shadows from trees and other obstructions. The result appears in 40 ms to 15 s as a GPU-generated heat map on the 3D model, without freezing the editor.
- Built a public lead-generation tool for solar dealers, where potential clients plan a solar installation themselves with a 2D SVG drawing engine and a solar energy production calculator.
- Authored 44% of all pull requests among nine contributors (2025–2026). Introduced coding standards and agentic skills in a vendor-neutral format, raising the monthly commit rate by 89%.

TypeScript, React, Zustand, React Three Fiber, WebGL, GLSL, three.js, shadcn/ui, GSAP, WebAssembly (WASM), Azure Functions, Google Maps API, Computer-Aided Design (CAD), Computational Geometry

Full Stack Developer — Loadster

contract Mar 2019 – Present

Cloud SaaS for load testing and uptime monitoring of websites and APIs.

- Shipped 300+ Vue 3 components, shared by 3 user-facing products and following the brand design system.
- Co-authored the public browser extension, used by 4,000 users and rated 4.9/5.0 in the Chrome Web Store.
- Optimized UI/UX in a free-trial flow, increasing sign-up conversion by 20%.
- Authored an AI-assisted engineering workflow, increasing the monthly average of pull requests by 11.9 times.
- Performed the progressive migration from JS/Webpack/Vue 2 to TS/Vite/Vue 3, introducing unit testing and reducing build time to seconds.
- Built an MCP server with role-based access control (RBAC) that limits what an AI agent can do, from read-only access up to launching cloud load tests that spend the customer's money.

TypeScript, JavaScript, Java, Vue, Vuex, Tailwind CSS, Canvas API, Stripe, Spring Boot, Spring AI, MariaDB, WebSockets, Playwright, Docker, WebExtension API, Chrome DevTools Protocol (CDP), Manifest V3, Shadow DOM, i18n

Full Stack Developer — hermit.tt

freelance Jun 2026 – Aug 2026

Portfolio website for a tattoo artist.

- Raised the mobile Lighthouse performance score from 85 to 99 and cut LCP from 3.6 s to 1.1 s.
- Eliminated hosting fees for the client by building a multilingual SSG website and CMS.

TypeScript, Nuxt 4, Sanity Studio CMS, Cloudflare Workers, Turborepo, Tailwind CSS, Google Search Console, i18n

OPEN-SOURCE PROJECTS

Author & Sole Full Stack Developer — timestop

independent Aug 2026 – Present

A local-first time tracker and report generator app for macOS and Windows.

- Replaced a paid time-tracker subscription, saving about $200 a year.
- Complemented a local-first app with an optional sync server, unlocking a teamwork capability for the product.

Electron, React, TanStack Query, shadcn/ui, Vitest, Zod, Drizzle ORM, SQLite, PostgreSQL, Playwright, Docker, Cloudflare Tunnel
