Konstantin Dolbilov

Full Stack Developer

Gijon, Spain (UTC+2) • cossamedia@gmail.com • github.com/konfrontend • linkedin.com/in/konstantin-dolbilov-94720b361

10+ years shipping web products end to end in TypeScript and Java: React and Vue.js frontends, 3D graphics in WebGL, Node.js and Spring Boot REST APIs, Electron apps, and workflows for AI coding agents.

SKILLS

- Languages: TypeScript, JavaScript, Java, SQL, HTML, CSS
- Frontend: React, Vue.js, Nuxt, Zustand, TanStack Query, Tailwind CSS, shadcn/ui, GSAP, Electron
- Web platform: Core Web Vitals, Accessibility (WCAG), SEO, SSG, i18n, PWA, Web Workers, WebSockets
- Graphics: three.js, React Three Fiber, WebGL, GLSL, SVG, Canvas API
- Backend and data: Node.js, Hono, Spring Boot, REST API, Role-based access control (RBAC), PostgreSQL, SQLite, Drizzle ORM, Zod
- Testing, build and DevOps: Vitest, Playwright, JUnit, Vite, Turborepo, GitHub Actions, CI/CD, Docker
- AI tooling: Claude Code, Model Context Protocol (MCP), Agentic Workflows, Prompt Engineering
- Methodologies: Agile/Scrum, Object-Oriented Programming (OOP), Domain Modeling, Architecture Decision Records

PROFESSIONAL EXPERIENCE

Loadster – Cloud SaaS for load testing and uptime monitoring of websites and APIs.
Full Stack Web Developer (Contract) Mar 2019 – Present

- Built 314 of the 332 components in the Vue.js design system on a Tailwind CSS theme, shared by 2 product dashboards and the Hugo marketing site, and made the dashboard mobile-responsive and its auth flow mobile-first.
- Shipped Playwright scripting for load tests across the Spring Boot API, the runtime, a Monaco Editor with custom IntelliSense, and live traces of a running test.
- Built the Loadster MCP server in Spring Boot: 23 tools, each covered by JUnit test cases, that let AI agents use the private Loadster API under role-based access control (RBAC).
- Designed the team's Claude Code workflow as engineering infrastructure: layered instruction files, per-module glossaries, path-scoped conventions, a documentation skill, and build, CI, runtime, and design docs; merged pull requests rose from 22.5 to 31.5 a month (12-month averages).

Jigawatt Solar – Software suite for solar installers: interactive 3D design and energy modeling.
Senior Frontend Developer (Contract) Oct 2019 – Jul 2026

- Authored the 3D roof modeling engine in React Three Fiber, WebGL and GLSL, 120+ modules and 34 components, tested by 64 Vitest cases: procedural roof volumes, reconstruction of roof structures by DCEL convex decomposition, and realtime editing.
- Built the shade simulation in a Web Worker: raycasting toward the sun over a Bounding Volume Hierarchy (BVH) finds each roof surface's shade fraction, and OffscreenCanvas renders shade heatmaps.
- Chose the 3D designer's frontend stack alone: React, TypeScript, Vite, Zustand, and three.js, with a feature-driven structure, lint rules, and a documented Z-up to Y-up coordinate boundary.

Nataliia Musikhina Website – Portfolio website for a tattoo artist.
Full Stack Developer (Freelance) Jun 2026 – Aug 2026

- Raised Lighthouse mobile performance on the home page from 85 to 99 and cut its LCP from 3.6 s to 1.1 s with zero layout shift: traced the LCP to the heading, not the background image, then preloaded its font face and inlined the critical CSS.

PROJECTS

timestop – Local-first time tracker app with an optional self-hosted sync server.
Author & Sole Full Stack Developer Aug 2026 – Present

- Built the Electron app in React, shadcn/ui, TanStack Router, and TanStack Query: one always-on-top window with Tracker, Dashboard, and Settings tabs, shipped as an Apple Silicon macOS disk image and a per-user Windows installer.
- Designed the local-first model: desktop SQLite is the source of truth, each write commits its entity row and an append-only change log entry in one transaction, and the server mirrors the desktop one way.
- Built the one-way sync server in Hono on Node.js with PostgreSQL: one authenticated REST endpoint stores each change once by id and updates entity tables in one transaction, so replays are no-ops.
