Konstantin Dolbilov

Frontend Developer

Gijon, Spain (CET, UTC+1) | cossamedia@gmail.com | github.com/konfrontend | linkedin.com/in/konstantin-dolbilov-94720b361

TypeScript / React / WebGL generalist, specializing in interactive 2D/3D graphics and UI/UX. I have an eye for design, value clean software architecture, accessibility, and performance.

PROFESSIONAL EXPERIENCE

Loadster https://loadster.com *Full Stack Developer (contract) | Mar 2019 – Present*

Cloud SaaS for load testing and uptime monitoring of websites and APIs.

- Shipped 300+ Vue 3 components, shared by 3 user-facing products and following the brand design system.
- https://chromewebstore.google.com/detail/bkhfnmahbfjemfpgehoolkhhdhbidaan
  Co-authored the public Loadster Recorder Extension, used by 4000 users and rated of 4.9/5.0 stars in Chrome Web Store. Complimenting the load-testing product with live browser recording (HTTP or Playwright).
- Built the MCP server in a Spring AI framework with role-based access control (RBAC) levels, from read-only to executing. MCP client got approved by public marketplaces and is supported in Claude Code, Codex, ChatGPT, and Cursor.
- Optimized UI/UX in a free trial flow, increasing sign-up conversion by 20%.
- Authored a Human-in-the-Loop AI-assisted engineering workflow, increasing the monthly average pull requests number by 11.9 times. Shipping features from triage to code review within hours instead of days.
- Built interactive 2D data-visualization components for real-time metrics rendering, featuring live-update, filters, zoom, aggregation, and public sharing (CSV, PDF, public URL) for business purposes.

Vue 3, Composition API, Tailwind CSS 4, npm workspaces, TypeScript, WebExtension API, Service Workers API, Shadow DOM, Chrome DevTools Protocol (CDP), Playwright, ARIA, Manifest V3, Claude Code, AI Skills, Prompt Engineering, Token Optimization, Domain-driven Design (DDD), Architecture Decision Records (ADR), Test-driven Development (TDD), Specification-driven Development (SDD), IntersectionObserver, RequestAnimationFrame (RAF), HTML5 Canvas, SVG

Jigawatt Solar https://jigawatt.solar *Senior Frontend Developer (contract) | 2019-10 – 2026-07*

SaaS for solar dealers and installers: from interactive 2D/3D design and energy modeling to CRM

- Engineered the user-facing 3D CAD-style modeling system in React Three Fiber, Zustand, and shadcn/ui. Shipped 80+ features, including procedural 3D mesh generation, real-time 3D topology editing, REST API and Google Maps API integrations.
- Authored the time-based shade simulation on WebGL in a Web Worker: an async algorithm for converting more than 2,600 sun positions into a precise energy-loss data model for a given solar array installation. Featuring the GPU-based image generation pipeline for instant visual representation of raw data as high-resolution heat map textures.
- https://site.wiz.solar
  Built a public web experience for potential clients to plan solar installation themselves: 2D SVG drawing engine, custom packing algorithm with O(n) complexity, draggable controls, Google Maps API integration, and solar energy production calculator.
- Built the PWA auto-update feature, preventing version skewing and data loss.
- Owned 47% of total commits among the other eight contributors. Introduced coding standards, developed domain glossary, architecture decision records, and agentic skills using vendor-neutral format.

TypeScript, three.js, Google Maps API, Vue.js, React 19, React Three Fiber, shadcn/ui, Tailwind CSS, Zustand, WebAssembly (WASM), Azure Functions, Computational Geometry, Computer-Aided Design (CAD), Web Workers API, WebGL, GLSL, Azure Blob Storage, Bounding Volume Hierarchy (BVH), Vuex, GSAP, SVG, Microsoft SQL Server, Progressive Web Application (PWA), Service Worker API, Claude Code, Test-driven Development (TDD), Specification-driven Development (SDD), Feature-driven Development (FDD), Domain-driven Design (DDD), Architecture Decision Records (ADR)

Nataliia Musikhina Website https://nataliiamusikhina.com *Full Stack Developer (freelance) | Jun 2026 – Aug 2026*

Portfolio website for a tattoo artist.

- Eliminated hosting fees for the client by building a true multilingual SSG website in Nuxt 4 and Sanity Studio CMS, and serving from Cloudflare Worker.

Sanity Studio CMS, Nuxt 4, Cloudflare Workers, Turborepo, TypeScript, Tailwind CSS, Google Search Console, Search Engine Optimization (SEO), Web Content Accessibility Guidelines (WCAG), Core Web Vitals, Static Site Generation (SSG), Content Delivery Network (CDN), Low-Quality Image Placeholder (LQIP), GitHub Actions, i18n

---

OPEN-SOURCE PROJECTS

timestop https://github.com/konfrontend/timestop *Author & Sole Full Stack Developer (independent) | Aug 2026 – Present*

A local-first time-tracker / report generator app for macOS and Windows. Made to reduce spending on software subscriptions. Electron, React, TanStack, shadcn/ui, SQLite.

Released two major versions, covering everything from research and development (R&D) and competitor product analysis to design, implementation, and end-to-end (e2e) testing.

- Complimented a local-first app with an optional sync server, unlocking a team work capability for the product.

Electron, React, SQLite, Zod, PostgreSQL, Drizzle ORM, Object-Relational Mapper (ORM), TanStack Query, TanStack Router, Playwright, Vitest, Docker, Turborepo, Cloudflare Tunnel

SKILLS

- Languages: TypeScript, JavaScript, Java, SQL, HTML, CSS
- Frontend: React, Vue.js, Vite, Turborepo, Nuxt, Zustand, TanStack Query, Tailwind CSS, shadcn/ui, GSAP, Motion, Zod
- Graphics: three.js, React Three Fiber (R3F), WebGL, GLSL, SVG, Canvas API
- Web platform: Core Web Vitals, Accessibility (WCAG), SEO, SSG, i18n, PWA, Web Workers, WebSockets
- Backend and data: Node.js, Express, Hono, Electron, Spring Boot, Spring AI, REST API, PostgreSQL, SQLite, Drizzle ORM, MariaDB, MongoDB
- Methodologies: Test-driven Development (TDD), Specification-driven Development (SDD), Feature-driven Development (FDD),
- DevOps: Cloudflare, AWS, Docker, Playwright, Vitest, JUnit, GitHub Actions, GitHub Worktrees
- AI / Agentic workflow: Claude Code, OpenAI Codex, Model Context Protocol (MCP), Domain-driven Design (DDD), Architecture Decision Records (ADR)
