Konstantin Dolbilov Web Developer

Gijon, Spain (UTC+2) • cossamedia@gmail.com • github.com/konfrontend • linkedin.com/in/konstantin-dolbilov-94720b361

Working on web software design, product UX, frontend and backend. Interested in interactive computer graphics. Open to contract or permanent roles.

PROFESSIONAL EXPERIENCE

Loadster Cloud SaaS for load testing and uptime monitoring of websites and APIs.
Full-stack Web Developer Mar 2019 – Present

- Built a Vue.js and Tailwind CSS component library with a UX baseline for the dashboard and Hugo marketing site modules of the Loadster monorepo.
- Rewrote the Loadster Recorder extension in TypeScript on the WebExtension API, letting users record actions as test code live in Chrome and Firefox.
- Designed the bridge from the dashboard's recording dialog to the extension, with its public library as a fully typed dependency.
- Shipped Playwright scripting end to end, from the API and runtime to live traces of a running load test and a Monaco Editor with custom IntelliSense.
- Built the Loadster MCP server in Spring Boot with 23 new tools that let AI agents drive the whole product, tested with JUnit.
- Rebuilt the engineering environment for AI agents; merged pull requests rose from about 30 to about 55 a month.

Jigawatt Solar Software suite for solar installers: interactive 3D design and energy modeling.
Senior Front-end Developer Oct 2019 – Jul 2026

- Authored the 3D roof modeling engine and workflow: procedural volume generation in WebGL, reconstruction and realtime editing with React Three Fiber.
- Built the shade-loss simulation in Web Workers that measures how much energy each roof loses to shade from nearby obstructions compared to insolation on site.
- Decided the production frontend stack alone: React, TypeScript, Vite, Vitest, Zustand and three.js. Introduced ADRs and a feature-driven structure.
- Built in-browser proposal and contract signing on PDF.js, where each party's fields lock on submit and the download is the signed file.

PROJECTS

autotriage Claude Code plugin that triages a freelance job posting and writes the proposal letter inside hook-enforced rails.
Author & Sole Developer Sep 2026 – Present

- Authored a public Claude Code plugin, alone, that takes a freelance job posting through an agentic workflow to a proposal letter ready to paste.
- Enforced the workflow with hooks that deny an out-of-order step and tell the model why, and validate every data write against its JSON Schema.

Time Stop Local-first time tracker app with an optional self-hosted sync server.
Author & Sole Full-stack Developer Aug 2026 – Present

- Authored the desktop app in Electron with React, TanStack Query, shadcn/ui and Turborepo, shipped for macOS and Windows on GitHub Releases.
- Designed the local-first model, SQLite as the source of truth, and built the self-hosted sync server that mirrors it in Hono on Node.js with PostgreSQL.
- Designed the two-dialect database layer in Drizzle ORM and Zod, and decided on the desktop database at about 52 MB of memory over one at about 1.3 GB.
- Built a deterministic agentic workflow on a glossary, rules and decisions settled before code: 70 pull requests in five weeks solo with AI agents.
